event.code
- Holds a string that identifies the physical key being pressed. The value is not affected by the current keyboard layout or modifier state, so a particular key will always return the same value

CapsLock	ShiftRight	ArrowUp
ShiftLeft	Backquote	ArrowDown
ControlLeft	Digit1	ArrowLeft
AltLeft	KeyQ	ArrowRight
MetaLeft	KeyA	Tab
Space	KeyZ	

event.key
- Will contain the key value of the key represented by the event.
- If the value has a printed representation, this attribute's value is the same as the char attribute
- Otherwise, it's one of the key value strings "Alt" "CapsLock" "Control"

CapsLock	Shift	
Shift	`	ArrowUp
Control	1	ArrowDown
Alt	q	ArrowLeft
Meta	a	ArrowRight
2	z	Tab

event.char
- Will contain the character value of the key if the key corresponds to a printable character
    - If the key doesn't correspond to a printable character (i.e., shift, alt, del) then event.code will contain the empty string
